

Package ‘fastRhockey’

March 25, 2022

Title Functions to Access Premier Hockey Federation and National Hockey League Play by Play Data

Version 0.3.0

Description A utility to scrape and load play-by-play data and statistics from the Premier Hockey Federation (PHF) <<https://www.premierhockeyfederation.com/>>, formerly known as the National Women's Hockey League (NWHL). Additionally, allows access to the National Hockey League's stats API <<https://www.nhl.com/>>.

<code>csv_from_url</code>	Load .csv / .csv.gz file from a remote connection
---------------------------	--

Description

This is a thin wrapper on `data.table::fread`

Usage

```
csv_from_url(...)
```

Arguments

... passed to `data.table::fread`

Value

a dataframe as created by `data.table::fread()`

<code>data</code>	Data in the package for reference
-------------------	--

Description

A dataset containing the full team names, abbreviations, colors & logos for all 32 NHL teams.

A dataset containing the full team names, abbreviations, colors & logos for all PHF teams.

Usage

```
nhl_team_logos
```

```
phf_team_logos
```

Format

A data frame with 32 rows and 11 variables:

full_team_name full team name
team_abbr NHL.com team abbreviation
team_nick lowercase, no spaces team nickname
division current NHL division
conference current NHL conference
team_logo_espn primary team logo from ESPN.com
team_color1 current primary team color
team_color2 current secondary team color
team_logo_alternate alternate or throwback logo
team_color_alt1 alternate logo primary color
team_color_alt2 alternate logo secondary color

A data frame with 6 rows and 7 variables:

full_team_name Full team name
team_abbr PremierHockeyFederation.com team abbreviation
team_nick Team Nickname
team_location PHF team location
team_color1 Current primary team color. Full disclosure, I just color picked from the logos
team_color2 Current secondary team color. Full disclosure, I just color picked from the logos
team_logo Primary team logo from fastRhockey data repository

espn_nhl_teams

Get ESPN NHL team names and ids

Description

Get ESPN NHL team names and ids

Usage

```
espn_nhl_teams()
```

Value

A teams data frame

Author(s)

Saiem Gilani

Examples

```
try(espnhl_teams())
```

load_nhl_pbp

Load fastRhockey NHL play-by-play

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_nhl_pbp(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code>).
dbConnection	A <code>DBIConnection</code> object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the play by play data table within the database

Value

A dataframe

Examples

```
try(load_nhl_pbp(2021))
```

load_nhl_player_box **Load fastRhockey NHL player box scores**

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_nhl_player_box(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code>).
dbConnection	A DBIConnection object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the player box data table within the database

Value

Returns a tibble

Examples

```
try(load_nhl_player_box(2021))
```

load_nhl_schedule **Load fastRhockey NHL schedules**

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_nhl_schedule(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code>).
dbConnection	A <code>DBIConnection</code> object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the schedule data table within the database

Value

Returns a tibble

Examples

```
try(load_nhl_schedule(2021))
```

load_nhl_team_box	Load fastRhockey NHL team box scores
-------------------	---

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_nhl_team_box(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by update_nhl_db()).
dbConnection	A DBIConnection object, as returned by DBI::dbConnect()
tablename	The name of the team box data table within the database

Value

Returns a tibble

Examples

```
try(load_nhl_team_box(2021))
```

load_phf_pbp

Load fastRhockey PHF play-by-play

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_phf_pbp(
  seasons = most_recent_phf_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

Arguments

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by update_phf_db()).
dbConnection	A DBIConnection object, as returned by DBI::dbConnect()
tablename	The name of the play by play data table within the database

Value

A dataframe

Examples

```
try(load_phf_pbp(2021))
```

`load_phf_player_box` **Load fastRhockey PHF player box scores**

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_phf_player_box(  
  seasons = most_recent_phf_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

Arguments

<code>seasons</code>	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
<code>...</code>	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_phf_db()</code>).
<code>dbConnection</code>	A <code>DBIConnection</code> object, as returned by <code>DBI::dbConnect()</code>
<code>tablename</code>	The name of the player box data table within the database

Value

Returns a tibble

Examples

```
try(load_phf_player_box(2021))
```

load_phf_schedule Load fastRhockey PHF schedules

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_phf_schedule(
  seasons = most_recent_phf_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

Arguments

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_phf_db()</code>).
dbConnection	A DBIConnection object, as returned by DBI::dbConnect()
tablename	The name of the schedule data table within the database

Value

Returns a tibble

Examples

```
try(load_phf_schedule(2021))
```

load_phf_team_box Load fastRhockey PHF team box scores

Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

Usage

```
load_phf_team_box(
  seasons = most_recent_phf_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

Arguments

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_phf_db()</code>).
dbConnection	A <code>DBIConnection</code> object, as returned by DBI::dbConnect()
tablename	The name of the team box data table within the database

Value

Returns a tibble

Examples

```
try(load_phf_team_box(2021))
```

```
most_recent_nhl_season
```

Most Recent NHL Season

Description

Most Recent NHL Season

Usage

```
most_recent_nhl_season()
```

Value

Value for most recent NHL season

most_recent_nhl_season_api_param

Most Recent NHL Season for NHL API

Description

Most Recent NHL Season for NHL API

Usage

most_recent_nhl_season_api_param()

Value

Value for most recent NHL season in the format of the NHL API

most_recent_phf_season

Most Recent PHF Season

Description

Most Recent PHF Season

Usage

most_recent_phf_season()

Value

Value for most recent NHL season

nhl_conferences

NHL Conferences

Description

Returns a table of current NHL conferences

Usage

nhl_conferences()

Value

Returns a data frame

- conference_id - conference ID
- name - conference name
- link - link to conference information
- abbreviation - conference abbreviation
- short_name - conference short name
- active - active conference flag

Examples

```
try(nhl_conferences())
```

nhl_conferences_info **NHL Conference Info**

Description

Returns information on a conference by conference ID

Usage

```
nhl_conferences_info(conference_id)
```

Arguments

conference_id Conference ID

Value

Returns a data frame

- conference_id - conference ID
- name - conference name
- link - link to conference information
- abbreviation - conference abbreviation
- short_name - conference short name
- active - active conference flag

Examples

```
try(nhl_conferences_info(conference_id = 7))
```

nhl_divisions	NHL Divisions
---------------	----------------------

Description

Returns information on divisions

Usage

```
nhl_divisions()
```

Value

Returns a data frame

- division_id -
- name -
- name_short -
- link -
- abbreviation -
- active -
- conference_id -
- conference_name -
- conference_link -

Examples

```
try(nhl_divisions())
```

nhl_divisions_info	NHL Divisions Info
--------------------	---------------------------

Description

Returns information on a division by division ID

Usage

```
nhl_divisions_info(division_id)
```

Arguments

division_id Division ID

Value

Returns a data frame

- division_id -
- name -
- name_short -
- link -
- abbreviation -
- active -
- conference_id -
- conference_name -
- conference_link -

Examples

```
try(nhl_divisions_info(division_id=17))
```

nhl_draft

NHL Draft

Description

Returns information on draft

Usage

```
nhl_draft()
```

Value

Returns a data frame: * year - * round - * pick_overall - * pick_in_round - * team_id - * team_name
- * team_link - * prospect_id - * prospect_full_name - * prospect_link -

Examples

```
try(nhl_draft())
```

nhl_draft_prospects **NHL Draft Prospects**

Description

Returns information on draft prospects

Usage

```
nhl_draft_prospects()
```

Value

Returns a data frame: * prospect_id - * full_name - * link - * first_name - * last_name - * birth_date - * birth_city - * birth_state_province - * birth_country - * height - * weight - * shoots_catches - * nhl_player_id - * draft_status - * nationality - * primary_position_code - * primary_position_name - * primary_position_type - * primary_position_abbreviation - * prospect_category_id - * prospect_category_short_name - * prospect_category_name - * amateur_team_name - * amateur_team_link - * amateur_league_name - * amateur_league_link - * ranks_final_rank - * ranks_draft_year -

Examples

```
try(nhl_draft_prospects())
```

nhl_draft_prospects_info **NHL Draft Prospects Info**

Description

Returns information on draft prospect for a given prospect id

Usage

```
nhl_draft_prospects_info(prospect_id)
```

Arguments

prospect_id Prospect unique ID

Value

Returns a data frame: * prospect_id - * full_name - * link - * first_name - * last_name - * birth_date - * birth_city - * birth_country - * nationality - * height - * weight - * shoots_catches - * nhl_player_id - * primary_position_code - * primary_position_name - * primary_position_type - * primary_position_abbreviation - * prospect_category_id - * prospect_category_short_name - * prospect_category_name - * amateur_team_link - * amateur_league_link -

Examples

```
try(nhl_draft_prospects_info(prospect_id=65242))
```

nhl_draft_year	NHL Draft by Year
----------------	--------------------------

Description

Returns information on draft for a given year

Usage

```
nhl_draft_year(year)
```

Arguments

year	Draft year (XXXX)
------	-------------------

Value

Returns a data frame: * year - * round - * pick_overall - * pick_in_round - * team_id - * team_name - * team_link - * prospect_id - * prospect_full_name - * prospect_link -

Examples

```
try(nhl_draft_year(year=2020))
```

nhl_game_boxscore	NHL Game Boxscore
-------------------	--------------------------

Description

Returns information on game boxscore for a given game id

Usage

```
nhl_game_boxscore(game_id)
```

Arguments

game_id	Game unique ID
---------	----------------

Value

Returns a named list of data frames: team_box, player_box, skaters, goalies, on_ice, on_ice_plus, penalty_box, scratches, team_coaches

Examples

```
try(nhl_game_boxscore(game_id=2021020182))
```

nhl_game_content	NHL Game Content
------------------	-------------------------

Description

Returns game content for a given game ID

Usage

```
nhl_game_content(game_id)
```

Arguments

game_id	Game unique ID
---------	----------------

Value

Returns a tibble

Examples

```
try(nhl_game_content(game_id=2021020182))
```

nhl_game_feed	NHL Game Feed
---------------	----------------------

Description

Returns information on game feed for a given game id

Usage

```
nhl_game_feed(game_id)
```

Arguments

game_id	Game unique ID
---------	----------------

Value

Returns a named list of data frames: all_plays, scoring_plays, penalty_plays, plays_by_period, current_play, linescore, decisions, team_box, player_box, skaters, goalies, on_ice, on_ice_plus, penalty_box, scratches, team_coaches

Examples

```
try(nhl_game_feed(game_id=2018020561))
```

nhl_game_shifts	NHL Game Shifts
-----------------	------------------------

Description

Returns information on game shifts for a given game id

Usage

```
nhl_game_shifts(game_id)
```

Arguments

game_id	Game unique ID
---------	----------------

Value

Returns a tibble

Examples

```
try(nhl_game_shifts(game_id=2021020182))
```

nhl_player_info	NHL Player Info
-----------------	------------------------

Description

Returns player information for a given player ID

Usage

```
nhl_player_info(player_id)
```

Arguments

player_id Player unique ID

Value

Returns a tibble

Examples

```
try(nhl_player_info(player_id=8476899))
```

nhl_player_stats	NHL Player Stats
------------------	-------------------------

Description

Returns player stats for a given player ID

Usage

```
nhl_player_stats(player_id)
```

Arguments

player_id Player unique ID

Value

Returns a tibble

Examples

```
try(nhl_player_stats(player_id=8476899))
```

nhl_schedule	NHL Schedule
--------------	---------------------

Description

Returns NHL Schedule data

Usage

```
nhl_schedule(season = NULL, day = as.Date(Sys.Date(), "%Y-%m-%d"))
```

Arguments

season NHL Season
day Date

Value

Returns a tibble

Examples

```
try(nhl_schedule(season = 2021))
```

`nhl_teams`**NHL Teams**

Description

Returns NHL Teams information

Usage

```
nhl_teams()
```

Value

Returns a tibble

Examples

```
try(nhl_teams())
```

`nhl_teams_info`**NHL Teams Info**

Description

Returns NHL Teams information for a given team ID

Usage

```
nhl_teams_info(team_id)
```

Arguments

`team_id` A unique team ID

Value

Returns a tibble

Examples

```
try(nhl_teams_info(team_id = 14))
```

nhl_teams_roster	NHL Teams Roster
------------------	-------------------------

Description

Returns NHL Teams roster information for a given team ID

Usage

```
nhl_teams_roster(team_id, season = most_recent_nhl_season_api_param())
```

Arguments

team_id	A unique team ID
season	season in format XXXXYYYYY

Value

Returns a tibble

Examples

```
try(nhl_teams_roster(team_id = 14, season = 20202021))
```

nhl_teams_stats	NHL Teams Stats
-----------------	------------------------

Description

Returns NHL Teams stats information for a given team ID

Usage

```
nhl_teams_stats(team_id, season = most_recent_nhl_season_api_param())
```

Arguments

team_id	A unique team ID
season	season in format XXXXYYYYY

Value

Returns a tibble

Examples

```
try(nhl_teams_stats(team_id = 14))
```

phf_game_all	<i>phf_game_all</i>
--------------	---------------------

Description

phf_game_all: pull in the raw data for a game_id from the PHF/NWHL API

Usage

```
phf_game_all(game_id)
```

Arguments

game_id The unique ID code for the game that you are interested in viewing the data for

Value

A named list of data frames: plays, team_box, skaters, goalies, game_details, scoring_summary, shootout_summary, penalty_summary, officials, team_staff, timeouts

Examples

```
try(phf_game_all(game_id = 268127))
```

phf_game_details	<i>phf_game_details</i>
------------------	-------------------------

Description

phf_game_details: pull in the raw data for a game_id from the PHF/NWHL API

Usage

```
phf_game_details(game_id)
```

Arguments

game_id The unique ID code for the game that you are interested in viewing the data for

Value

A data frame with game team details

Examples

```
try(phf_game_details(game_id = 268078))
```

<i>phf_game_raw</i>	<i>phf_game_raw</i>
---------------------	---------------------

Description

phf_game_raw: pull in the raw data for a *game_id* from the PHF/NWHL API

Usage

```
phf_game_raw(game_id)
```

Arguments

game_id The unique ID code for the game that you are interested in viewing the data for

Value

A list of data frames

Examples

```
try(phf_game_raw(game_id = 268078))
```

<i>phf_game_summary</i>	<i>phf_game_summary</i>
-------------------------	-------------------------

Description

phf_game_summary: pull in the raw data for a *game_id* from the PHF/NWHL API

Usage

```
phf_game_summary(game_id)
```

Arguments

game_id The unique ID code for the game that you are interested in viewing the data for

Value

A named list of data frames: scoring_summary,shootout_summary, penalty_summary, officials, team_staff, timeouts

Examples

```
try(phf_game_summary(game_id = 268078))
```

phf_leaders

phf_leaders

Description

PHF Player Leaderboards

Usage

```
phf_leaders(player_type, season = 2021, season_type = "Regular Season")
```

Arguments

player_type Player type: skaters, goalies

season Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

season_type Season type: Regular Season or Playoffs

Value

A data frame of stat leaders

Examples

```
try(phf_leaders(player_type = "skaters", season = 2022, season_type="Regular Season"))
try(phf_leaders(player_type = "goalies", season = 2022, season_type="Regular Season"))
```

phf_league_info	<i>PHF League Information per year</i>
-----------------	--

Description

PHF League Information per year

Usage

```
phf_league_info(season = 2022)
```

Arguments

season	Season (YYYY) to pull the league info and IDs for. Season is the concluding year in XXXX-YY format
--------	--

Value

A named list of data frames: seasons, divisions, teams, league, officials, brackets

Examples

```
try(phf_league_info(season = 2021))
```

phf_pbp	<i>phf_pbp</i>
---------	----------------

Description

phf_pbp: pull in the raw data for a game_id from the PHF/NWHL API

Usage

```
phf_pbp(game_id)
```

Arguments

game_id	The unique ID code for the game that you are interested in viewing the data for
---------	---

Value

A data frame of play by play information

Examples

```
try(phf_pbp(game_id = 268127))
```

<code>phf_player_box</code>	<i>phf_player_box</i>
-----------------------------	-----------------------

Description

`phf_player_box`: loads the player boxscore

Usage

```
phf_player_box(game_id)
```

Arguments

`game_id` The unique ID code for the game that you are interested in viewing the data for

Value

A named list of data frames: skaters, goalies

Examples

```
try(phf_player_box(game_id = 420339))
```

<code>phf_player_stats</code>	<i>phf_player_stats</i>
-------------------------------	-------------------------

Description

`phf_player_stats`: loads the player stats

Usage

```
phf_player_stats(player_id)
```

Arguments

`player_id` The unique ID code for the player that you are interested in viewing the data for

Value

A named list of data frames: career, game_log

Examples

```
try(phf_player_stats(player_id = 431611))
```

<i>phf_schedule</i>	<i>phf_schedule</i>
---------------------	---------------------

Description

PHF Schedule lookup

Usage

```
phf_schedule(season)
```

Arguments

season Season (YYYY) to pull the schedule from, the concluding year in XXXX-YY format

Value

A data frame with schedule data

Examples

```
try(phf_schedule(season=2022))
```

<i>phf_standings</i>	<i>phf_standings</i>
----------------------	----------------------

Description

phf_standings: pull in the standings data for a game_id from the PHF/NWHL API

Usage

```
phf_standings(season = most_recent_phf_season())
```

Arguments

season Season (YYYY) to pull the standings from, the concluding year in XXXX-YY format

Value

A data frame of standings data

Examples

```
try(phf_standings(season = most_recent_phf_season()))
```

<code>phf_team_box</code>	<i>phf_team_box</i>
---------------------------	---------------------

Description

`phf_team_box`: loads the team boxscore and shot/score data for a game into one data frame through just one function

Usage

```
phf_team_box(game_id)
```

Arguments

game_id The unique ID code for the game that you are interested in viewing the data for

Value

A dataframe of team-level box score information

Examples

```
try(phf_team_box(game_id = 420339))
```

phf_team_roster *phf_team_roster*

Description

PHF Team Roster lookup

Usage

```
phf_team_roster(team, season = most_recent_phf_season())
```

Arguments

team	Team name with nickname (e.g. Boston Pride, Buffalo Beauts)
season	Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

Value

A named list of data frames: roster, team_staff

Examples

```
try(phf_team_roster(team = "Boston Pride", season = 2022))
```

phf_team_stats *phf_team_stats*

Description

PHF Team Stats lookup

Usage

```
phf_team_stats(team, season = most_recent_phf_season())
```

Arguments

team	Team name with nickname (e.g. Boston Pride, Buffalo Beauts)
season	Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

Value

A named list of data frames: skaters, goalies

Examples

```
try(phf_team_stats(team = "Boston Pride", season = 2022))
```

`progressively`

Progressively

Description

This function helps add progress-reporting to any function - given function `f()` and progressor `p()`, it will return a new function that calls `f()` and then (on-exiting) will call `p()` after every iteration.

Usage

```
progressively(f, p = NULL)
```

Arguments

`f` a function to add progressr functionality to.
`p` a progressor function as created by `progressr::progressor()`

Details

This is inspired by `purrr`'s `safely`, `quietly`, and `possibly` function decorators.

Value

a function that does the same as `f` but it calls `p()` after iteration.

rds_from_url	Load .rds file from a remote connection
--------------	--

Description

Load .rds file from a remote connection

Usage

```
rds_from_url(url)
```

Arguments

url	a character url
-----	-----------------

Value

a dataframe as created by [readRDS\(\)](#)

update_nhl_db	Update or create a fastRhockey NHL play-by-play database
---------------	---

Description

update_nhl_db() updates or creates a database with fastRhockey play by play data of all completed and available games since 2011.

Usage

```
update_nhl_db(
  dbdir = ".",
  dbname = "fastRhockey_db",
  tblname = "fastRhockey_nhl_pbp",
  force_rebuild = FALSE,
  db_connection = NULL
)
```

Arguments

dbdir	Directory in which the database is or shall be located
dbname	File name of an existing or desired SQLite database within dbdir
tblname	The name of the play by play data table within the database
force_rebuild	Hybrid parameter (logical or numeric) to rebuild parts of or the complete play by play data table within the database (please see details for further information)
db_connection	A DBIConnection object, as returned by DBI::dbConnect() (please see details for further information)

Details

This function creates and updates a data table with the name `tblname` within a SQLite database (other drivers via `db_connection`) located in `dbdir` and named `dbname`. The data table combines all play by play data for every available game back to the 2010 season and adds the most recent completed games as soon as they are available for `fastRhockey`.

The argument `force_rebuild` is of hybrid type. It can rebuild the play by play data table either for the whole `fastRhockey` era (with `force_rebuild = TRUE`) or just for specified seasons (e.g. `force_rebuild = c(2019, 2020)`). Please note the following behavior:

- `force_rebuild = TRUE`: The data table with the name `tblname` will be removed completely and rebuilt from scratch. This is helpful when new columns are added during the Off-Season.
- `force_rebuild = c(2019, 2020)`: The data table with the name `tblname` will be preserved and only rows from the 2019 and 2020 seasons will be deleted and re-added. This is intended to be used for ongoing seasons because ESPN's data provider can make changes to the underlying data during the week.

The parameter `db_connection` is intended for advanced users who want to use other DBI drivers, such as `MariaDB`, `Postgres` or `odbc`. Please note that the arguments `dbdir` and `dbname` are dropped in case a `db_connection` is provided but the argument `tblname` will still be used to write the data table into the database.

Value

Logical TRUE/FALSE

update_phf_db

Update or create a fastRhockey PHF play-by-play database

Description

`update_phf_db()` updates or creates a database with `fastRhockey` play by play data of all completed and available games since 2011.

Usage

```
update_phf_db(
  dbdir = ".",
  dbname = "fastRhockey_db",
  tblname = "fastRhockey_phf_pbp",
  force_rebuild = FALSE,
  db_connection = NULL
)
```

Arguments

dbdir	Directory in which the database is or shall be located
dbname	File name of an existing or desired SQLite database within dbdir
tblname	The name of the play by play data table within the database
force_rebuild	Hybrid parameter (logical or numeric) to rebuild parts of or the complete play by play data table within the database (please see details for further information)
db_connection	A DBIConnection object, as returned by <code>DBI::dbConnect()</code> (please see details for further information)

Details

This function creates and updates a data table with the name `tblname` within a SQLite database (other drivers via `db_connection`) located in `dbdir` and named `dbname`. The data table combines all play by play data for every available game back to the 2016 season and adds the most recent completed games as soon as they are available for `fastRhockey`.

The argument `force_rebuild` is of hybrid type. It can rebuild the play by play data table either for the whole `fastRhockey` era (with `force_rebuild = TRUE`) or just for specified seasons (e.g. `force_rebuild = c(2019, 2020)`). Please note the following behavior:

- `force_rebuild = TRUE`: The data table with the name `tblname` will be removed completely and rebuilt from scratch. This is helpful when new columns are added during the Off-Season.
- `force_rebuild = c(2019, 2020)`: The data table with the name `tblname` will be preserved and only rows from the 2019 and 2020 seasons will be deleted and re-added. This is intended to be used for ongoing seasons because ESPN's data provider can make changes to the underlying data during the week.

The parameter `db_connection` is intended for advanced users who want to use other DBI drivers, such as `MariaDB`, `Postgres` or `odbc`. Please note that the arguments `dbdir` and `dbname` are dropped in case a `db_connection` is provided but the argument `tblname` will still be used to write the data table into the database.

Value

Logical TRUE/FALSE
